TUBERCULOSIS (TB) SCREENING FORM

Name: ________________________________  Date: _______________________

The PPD (Mantoux) test is an intracutaneous tuberculin test accepted as an aid in the diagnosis of tuberculosis infection. Health care providers test individuals who have no history of a positive PPD skin test. A health care professional must read the test result in 48-72 hours from the time that the skin test was administered.

Results of Test (Check one box only):

- **Negative Result:** Non-significant (no palpable area of induration)
- **Positive Result:** Significant (any palpable area of induration) measurement___________________

Health Care Provider Signature: _____________________________________  Date: _______________

** ATTACH A COPY OF YOUR TB SCREENING FORM (COMPLETED WITHIN THE LAST YEAR) BY A HEALTH CARE PROVIDER. **
