Shippensburg University – Placement Testing

Options for Students Testing at Level 6 in Mathematics

Congratulations! You scored into Level 6.

Since you are strong in math, it is advised that you consider a math-related major/minor OR education major.

You will build your first semester schedule based on major/interest area. If you have declared or are interested in Biology, Business (all majors), Chemistry, Computer Science, Economics, Engineering (all types), Mathematics, Middle-Level Education majors and Physics, you will almost certainly be taking math your first semester. If not, you should meet with your advisor during the drop/add period to determine if changes are needed.

People with other majors/interests may choose not to register into a math class the first semester. If you chose not to register for a math class, you should consult with your academic advisor about whether a math class is required, the appropriate math class to take, and the appropriate time to take it.
