The Supply Chain Boot Camp will be a highly interactive introduction and refresher on multiple topical subjects in supply chain management.

During the two-day boot camp, the instructors will introduce different topics on supply chain management and supply chain analytics, including case studies and experiential learning exercises.

Students will work through exercises and examples before delving deeper into each topic with highly interactive experiential learning.

Additional topics include inventory management, data visualization and analytics, linear programming, sustainability, lean six sigma, root cause analysis, and process flow and variation.

Participants will also have an opportunity to network with each other and Shippensburg’s Supply Chain Management faculty.

Learning Objectives

- Improve understanding of how inventory and variation affect process flow
- Learn to implement continuous improvement methodologies, such as lean six sigma
- Review and analyze raw data to make better business decisions
- Determine the factors that are most important to process improvement and how to control them.

Program Details

Location: Shippensburg University
Schedule: August 18th and 19th
Cost:
- For individuals: $2200
- For employers - $2200 for the first employee, $2000 for each additional employee

Who should participate?

Anyone who currently works in the supply chain industry and wants a refresher or those who moved into the supply chain industry and desire to gain skills and knowledge needed to succeed.

Program Faculty

Dr. Ian Langella, Professor of Supply Chain Management and Chair of the Finance & Supply Chain Management Department at Shippensburg University
Dr. Robert Neidigh, Assistant Professor, Finance and Supply Chain Management Department at Shippensburg University
